

## Search Text - Liz

1

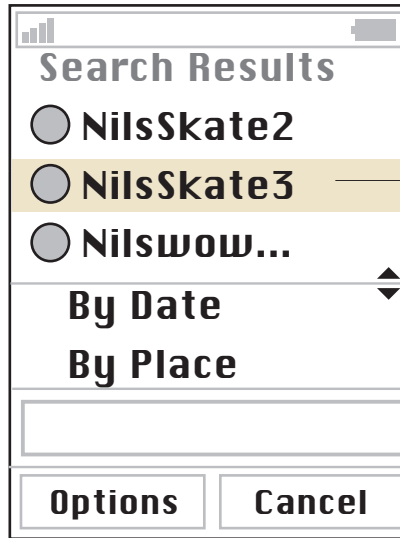

activate "Find" by button selection (raises field)

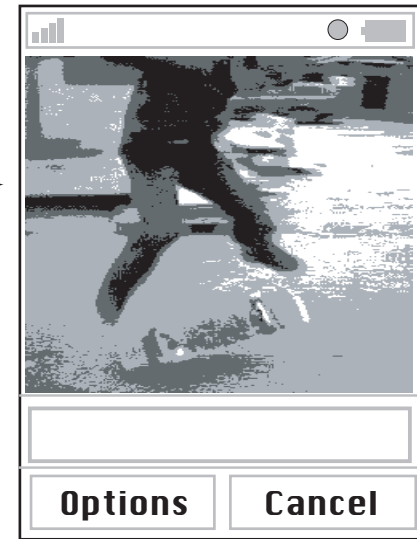

switches keypad from phone to text entry. example reference orange.

First searches user's phone and synched devices for items regardless of app.

Scrolls on down to search/find by date, place, mobile web, www, etc.

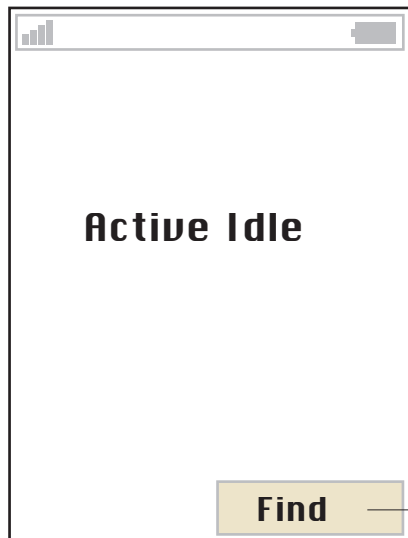

Skate video appears, song plays (if multiple select). Search is still available.

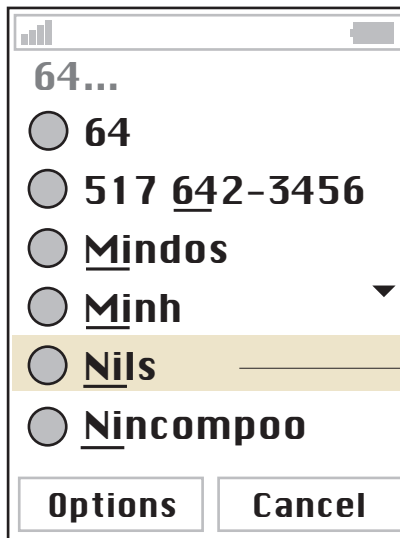

**Notes: If Search Field on most all pages, only in the results would user have choice to search web or specific areas. Can be Mainly contextual - depends what user is currently immersed in or often uses.**

2

activate "find" contextual- users phone and synched devices. Find is contextual unless otherwise chosen from main "find" app.

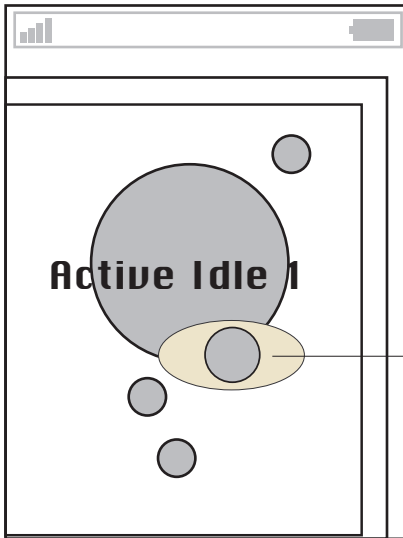

user starts typing numbers. after finding phone numbers - change to letters. realtime. example reference qix.

**Notes: Multiple select for different app types? (music and video)**

## Search Text + - Liz

3

Liz always searches for Nils or Shoes

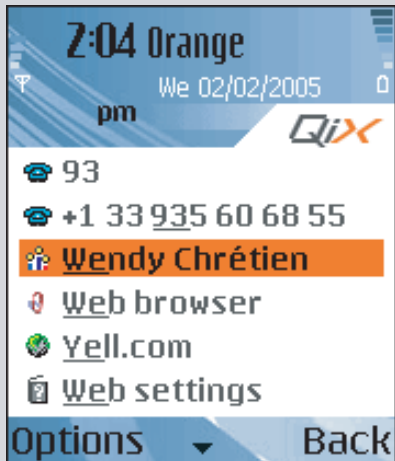

Notes: Find/Search as a main app in tab area. Can be contextual. Also shows most viewed area and web choices.

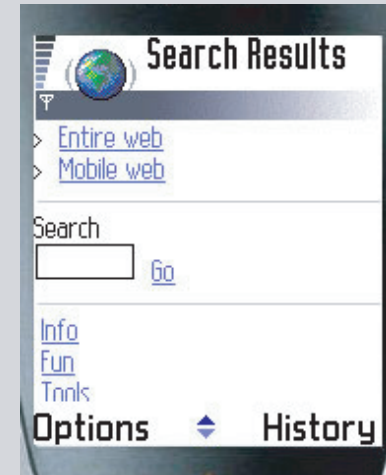

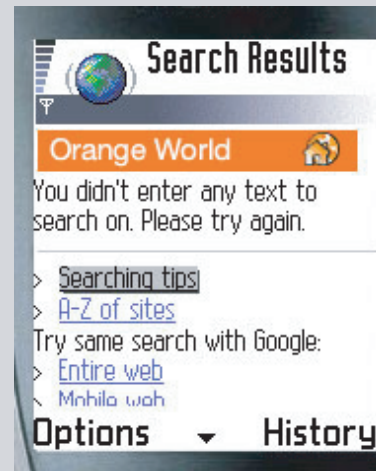

Notes: Find/Search as an often used app/person/thing. User clicks through "things", background to foreground. User can also click through idle screens- aka layers. Liz has 3. How do they do this? I am not sure.

# Search Tag Based - Liz

1

activate "Find" by button selection (raises field)

switches keypad from phone to text entry.

First searches user's phone and synched devices for items regardless of app.

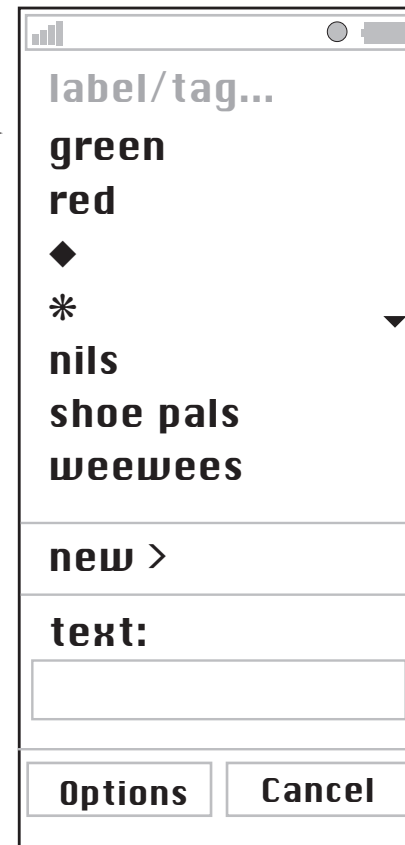

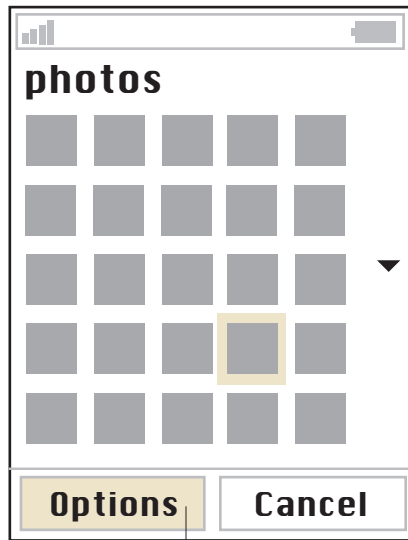

Scrolls on down to search/find by date, place, mobile web, www, etc.

Results show cross content/app findings

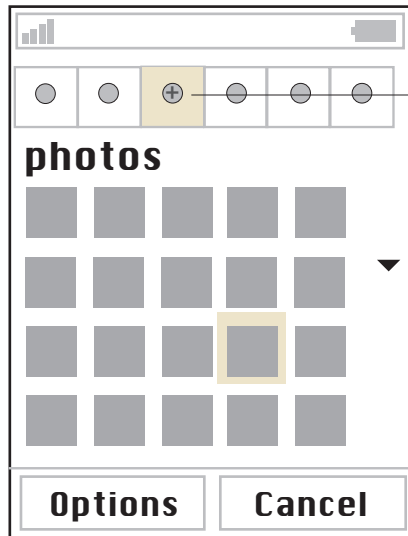

# How do we Define Tags? - Liz

Tags/Labels are colors, words, symbols, downloadable symbols, pictures (?)

or

The "add a tag/label" could be a main action item/icon, available on most screens for numerous tagging opportunities.
